

# CSGO Match Outcome Predictor

Justin Bell

How can we predict the outcome of  
a match using player and team  
statistics?

# Data Wrangling

- Import Data
- Merge Dataframes
- Data Cleaning
  - Null values
  - Data types
  - Columns
- Create Team Dataframe

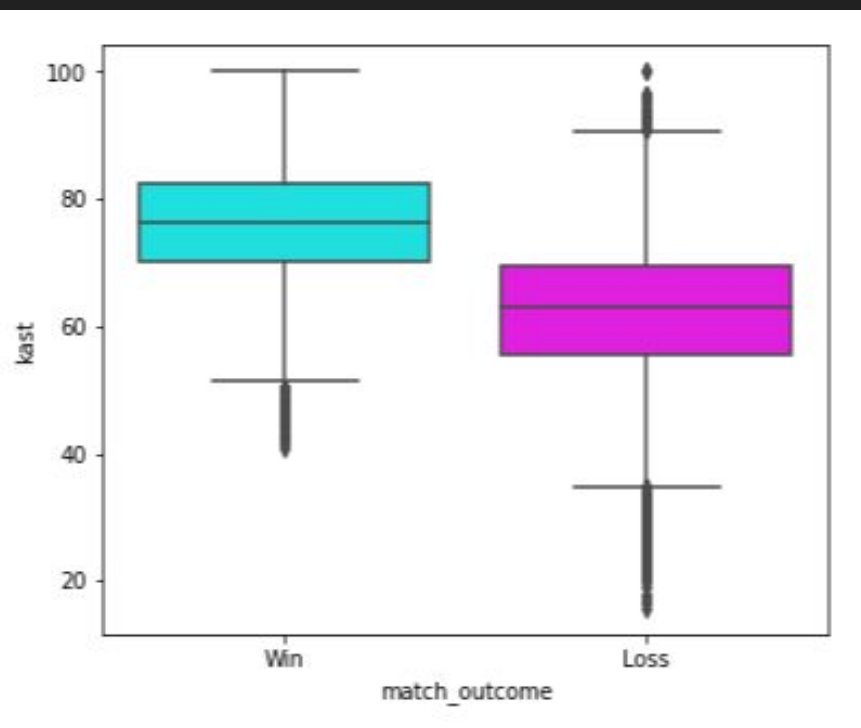

# EDA

Individual Performance

- Split Data by Match Outcome
- Create Plots to Compare Distributions

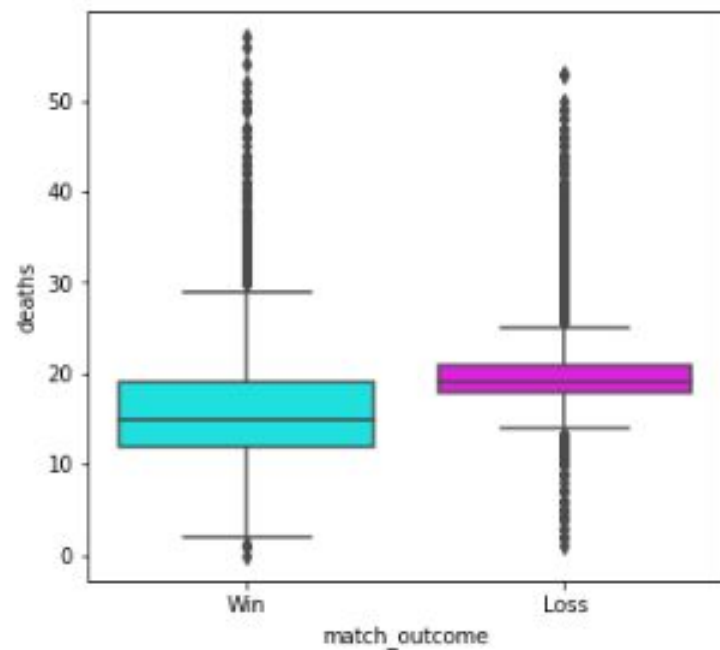

Top 10 Country of Origin for Players by Match Outcome

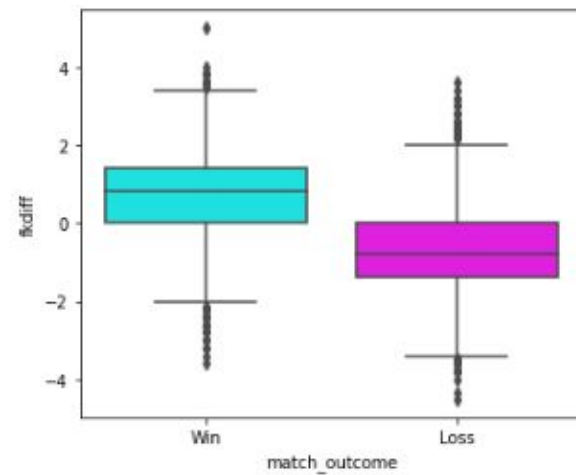

# EDA

Team Performance

- Split Data by Match Outcome
- Create Plots to Compare Distributions

# Preprocessing

- Train/Test Split
- Split Numerical and Categorical Features
- Scale Numeric Features
- Encode Dummy Variables
- Merge Back Together

# Modeling

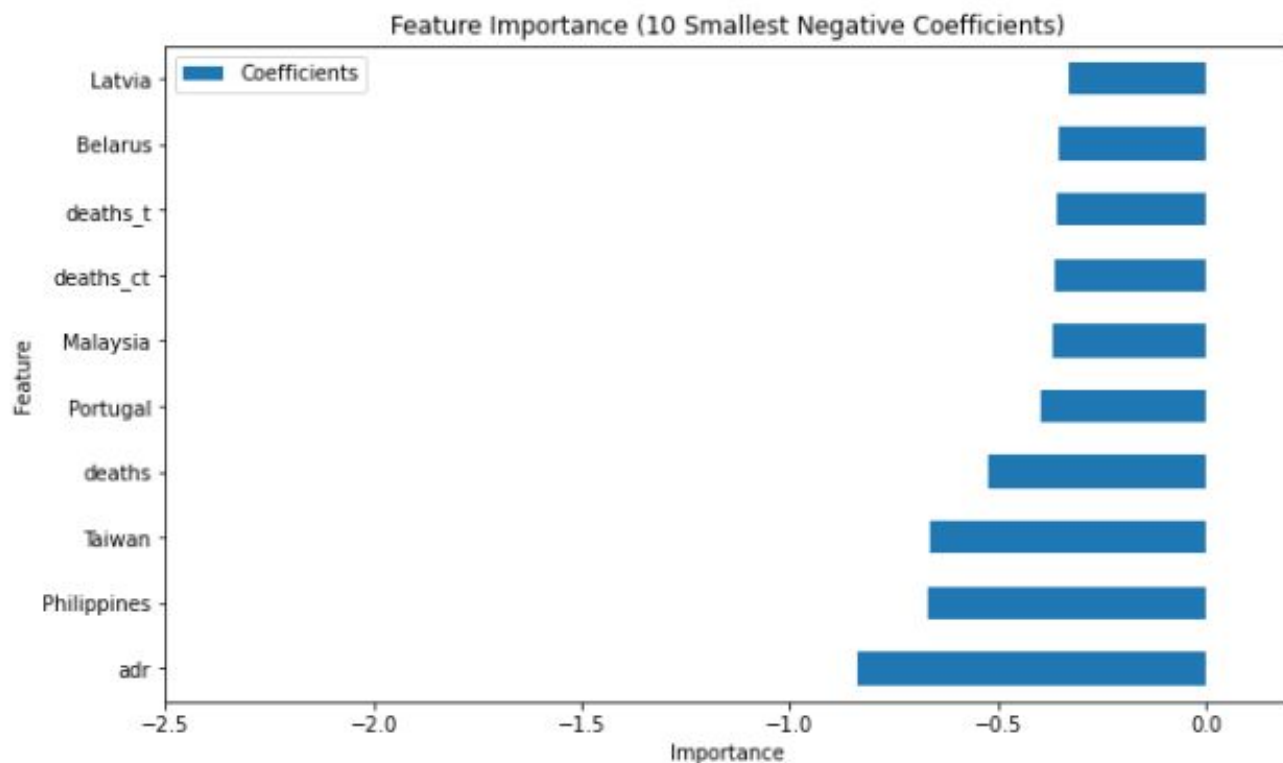

## Individual Performance

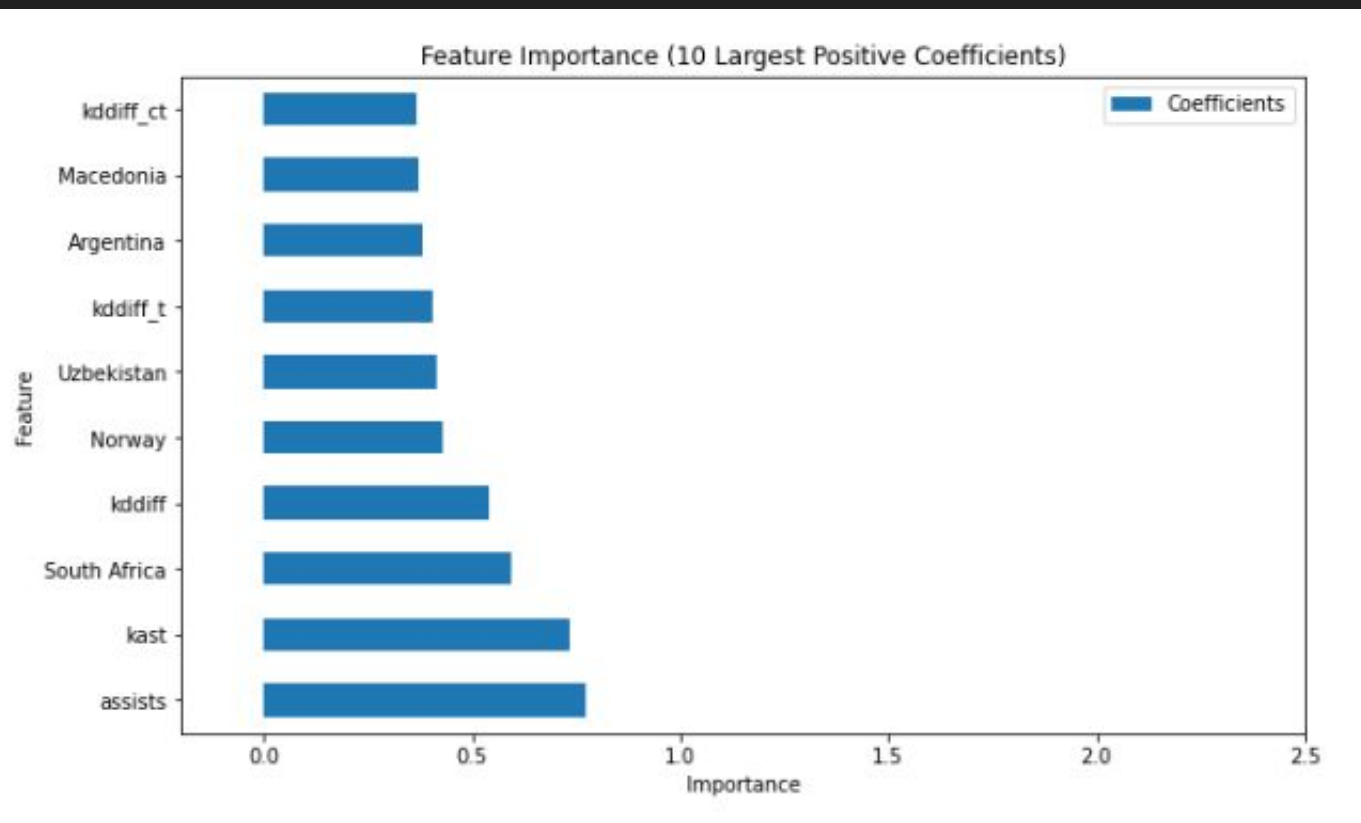

- Logistic Regression
  - F1-Score (Training): 0.817
- Random Forest
  - F1-Score (Training): 0.812
- Gradient Boosting
  - F1-Score (Training): 0.813

# Best Model

- Logistic Regression
  - C: 0.1
  - Penalty: l2
  - Solver: liblinear
  - ROC-AUC Score: 0.898

# Modeling

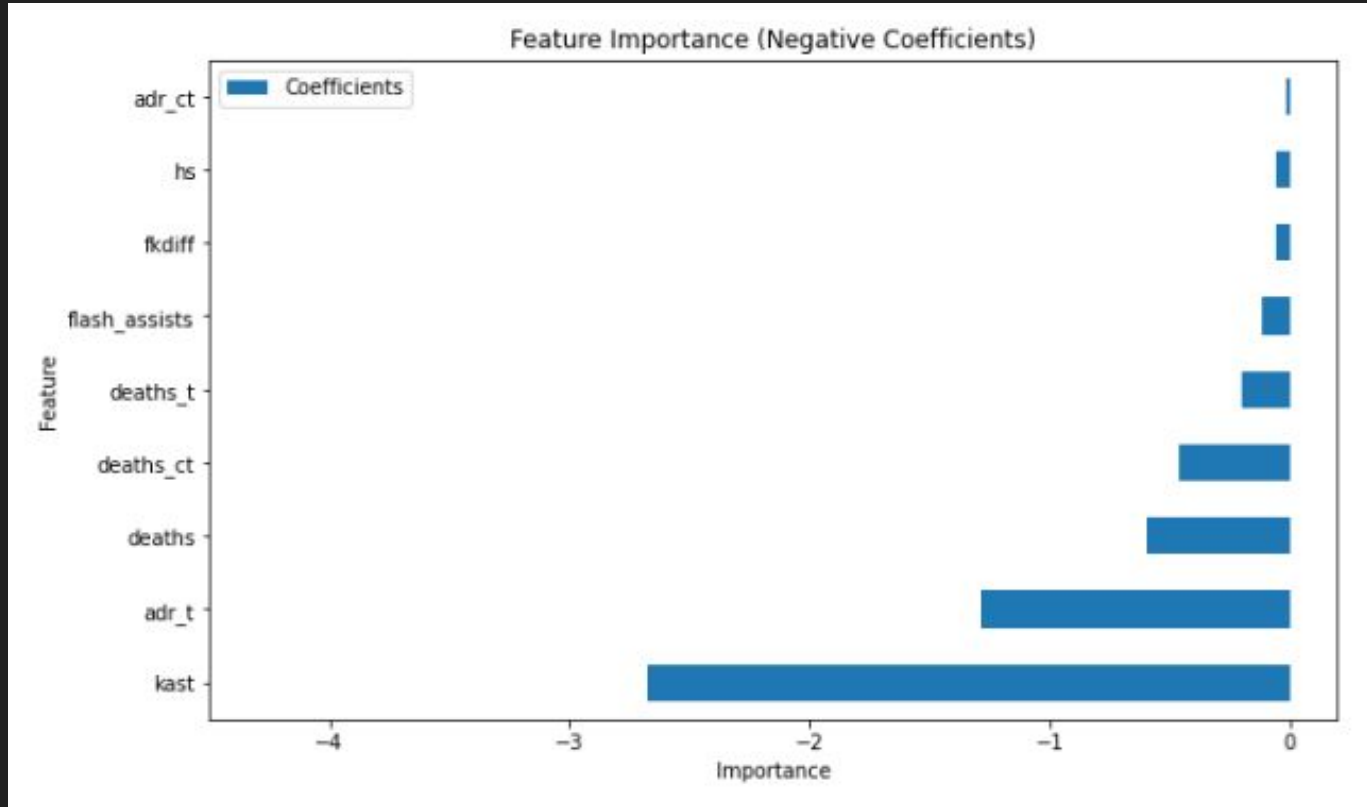

Team Performance

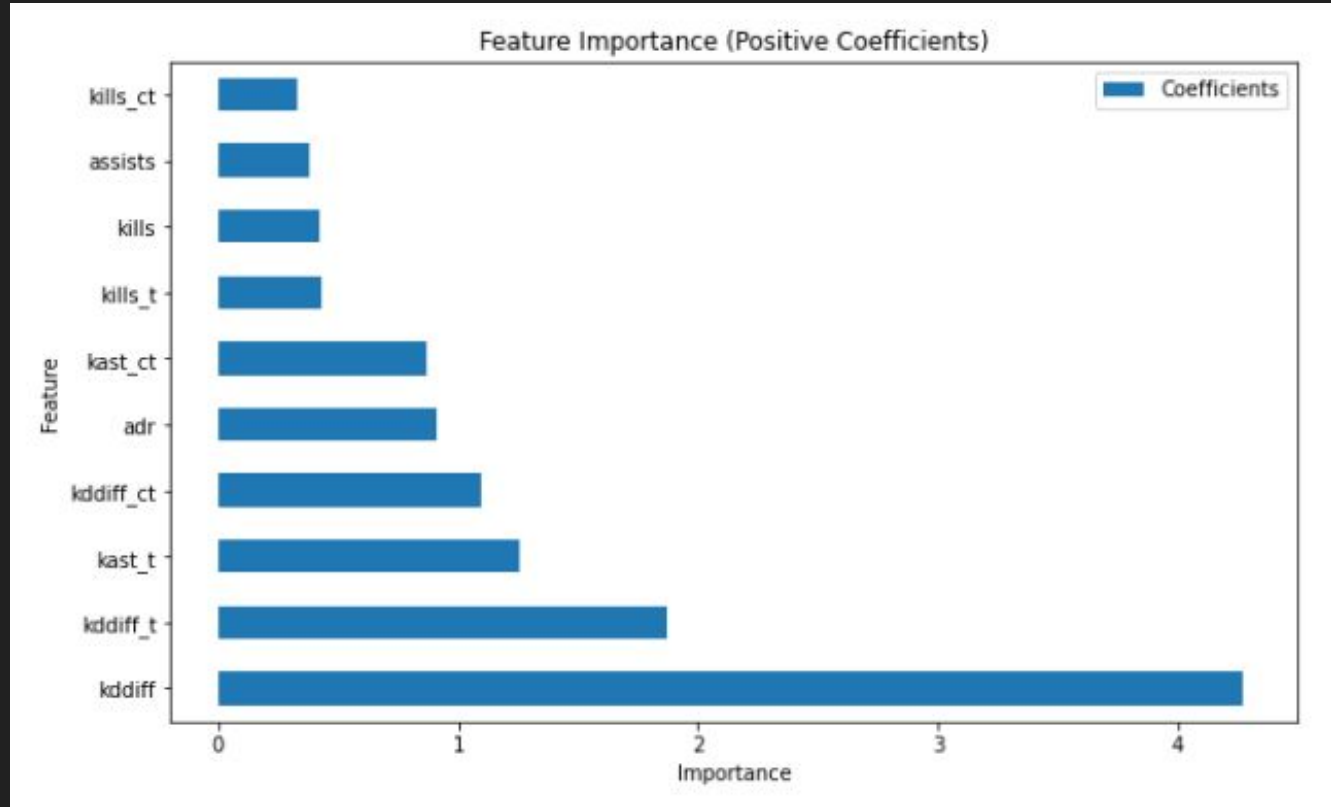

- Logistic Regression
  - F1-Score (Training): 0.945
- Random Forest
  - F1-Score (Training): 0.943
- SVM
  - F1-Score (Training): 0.945

# Best Model

- Logistic Regression
  - C: 10.0
  - Penalty: l1
  - Solver: liblinear
  - ROC-AUC Score: 0.988

# Future Scope

- Explore more models
- Look at matches other than b01s
- Exploring T and CT differences further
- Map vetos
- Valorant comparisons
